

The background is a dark teal color with various financial symbols and numbers scattered across it. Symbols include the dollar sign (\$), pound sterling (£), and Euro (€). Numbers are in different sizes and colors (yellow and white). Some numbers are accompanied by upward or downward arrows, suggesting trends or data points. The overall theme is financial or economic data.

CAPSTONE PROJECT

Stack Overflow – Developer Survey Results 2019

Nooryourhanes Amdani
2 November 2022

OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Nearly 90,000 developers took the 20-minute Stack Overflow's annual Developer Survey survey in 2019
- Analysis are breakdown according to the data demographics and technologies
- Survey results are shown in this presentation
 - Programming Language Trends
 - Database Trends
 - Platform Trends
 - Web Frame Trends

INTRODUCTION

- Stack Overflow's annual Developer Survey is the largest and most comprehensive survey of people who code around the world.
- The survey is covering everything from developers' favorite technologies to their job preferences.
- Objective : To identify skill requirements in demands and future
 - Top 10 Programming Languages
 - Top 10 Databases
 - Popular Platform
 - Top 10 Web frames

METHODOLOGY

- Data Collection :
 - Stack Overflow's Developer Survey
 - Collecting Data using APIs
 - Collecting Data using Web Scraping
- Data Exploration
- Data Wrangling :
 - Finding and removing duplicates
 - Finding and imputing missing values
 - Normalization
- Exploratory Data Analysis
 - Analyzing the data distribution
 - Handling outliers
 - Finding correlation
- Data Visualization using Jupyter Notebook and IBM Cognos Analytic for dashboard.
- PowerPoint Presentation

RESULTS

Results for the analysis by looking at the findings and implications :

- Programming Language Trends
- Database Trends

PROGRAMMING LANGUAGE TRENDS

Current Year

Next Year

PROGRAMMING LANGUAGE TRENDS

- FINDINGS & IMPLICATIONS

01

JavaScript

JavaScript is the most commonly used programming language for year 2019 and also the most popular desired language for the upcoming year.

02

HTML / CSS

HTML / CSS is the second most commonly used programming language in 2019 and also as desired language for the upcoming year.

03

Python

Python has shown rising in the ranks this year.

From the results, it obviously shows that JavaScript stays demanded and more and more people want to learn about this technology. A wide variety of add-ons extend the functionality of JavaScript which is one of the reason why it is commonly used programming language.

HTML / CSS is still high in ranks because of more Professional Developers and beginners chose to use this language this year and in the future.

Python is regarded as a programming language that's easy to learn, due to its simple syntax, a large library of standards and toolkits, and integration with other popular programming languages such as C and C++. It shows that Python is the fastest-growing major programming language today. Therefore Python is high in demand and in rising trend.

DATABASE TRENDS

Current Year

Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

01 PostgreSQL

PostgreSQL is the third popular database in 2019 and it shows the trend is increasing in the future.

02 MongoDB

MongoDB also shows increase in popularity in the future.

03 MySQL

MySQL is the most popular database in 2019 but it shows less desirable in the future.

PostgreSQL is commonly used by Professional Developers. This shows that PostgreSQL is gaining popularity due to increasing demand from the Developers. And highly chances to surpass MySQL in the future.

This makes sense since it supports a large number of languages and application development platforms. MongoDB is very useful for companies which store e-commerce product catalog or content.

MySQL is the most popular because it is one of the first open-source databases, packed with extremely useful and robust features. The open-source aspect of MySQL and its maturity makes it a popular SQL database for web applications.

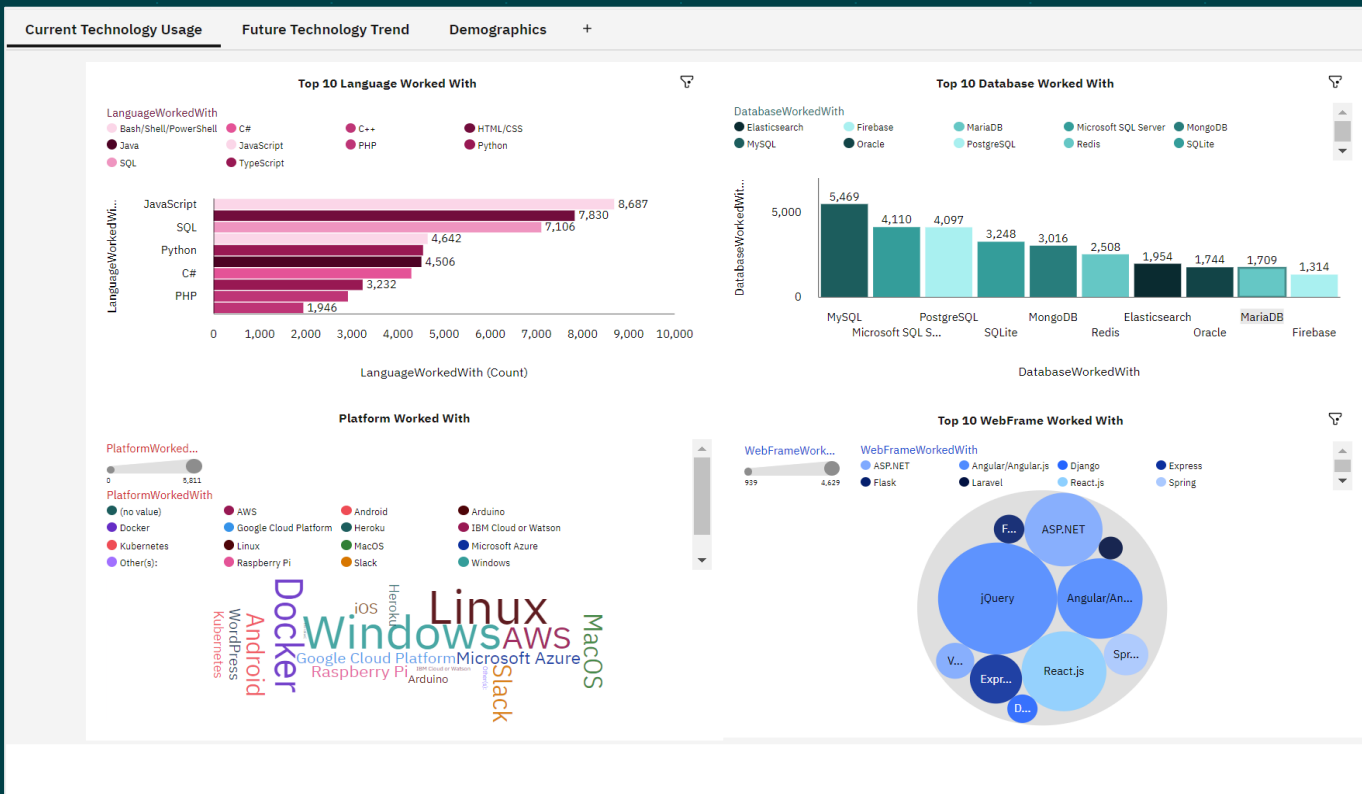

DASHBOARD

DISCUSSION

Overall findings and implications are discussed by looking at the findings :

- Programming Language Trends
- Database Trends
- Dashboard for Current and Future Technology Usage and Demographic Characteristics.

OVERALL FINDINGS & IMPLICATIONS

LANGUAGE

Top 3 for Current
Technology Usage :
**JavaScript, SQL,
Python**

Top 3 for Future
Technology Usage :
**JavaScript, HTML /
CSS, Python**

DATABASE

Top 3 for Current
Technology Usage :
**MySQL, Microsoft
SQL Server,
PostgreSQL**

Top 3 for Future
Technology Usage :
**PostgreSQL,
MongoDB, Redis**

PLATFORM

Top 3 for Current
Technology Usage :
**Linux, Windows,
Docker**

Top 3 for Future
Technology Usage :
Linux, Docker, AWS

WEB FRAME

Top 3 for Current
Technology Usage :
**Node.js, .NET, .NET
Core**

Top 3 for Future
Technology Usage :
**JavaScript, HTML /
CSS, Python**

- Increase in popularity shows that there is in high demand that are due to increase job postings and high-based salary.
- Technologies are clustered together into related ecosystems that tend to be used by the same developers.
- There is a large cluster for web development (with JavaScript, HTML/CSS, TypeScript, and React.js) connected via SQL to one for Microsoft technologies (with C#, Visual Studio, and .NET Core).
- This year also we can observe a cluster of operations technologies with Docker, AWS, and PostgreSQL connected to the Python ecosystem network through Linux.
- Therefore, the correlation of these technologies lead to high in popularity in their respective groups.

CONCLUSION

- Based on the findings, as a conclusion, the technologies popularities and demands are correlated to each other in the system.
- According to the job postings and salaries based on the different type of languages, we are pretty sure that which technologies are in demand.
- Mostly for the findings, there are more men who are interested to these technologies in comparison to women. As a recommendation, more awareness and advertisement can be made to both genders as we are moving to era of technology where can benefit both genders.
- As a recommendation, by looking at the survey results, we can predict what the future technology are look alike.

APPENDIX

- These includes Number of Job Postings and Popular Languages graphs.

JOB POSTINGS

POPULAR LANGUAGES
